SUMMARY

French CPA candidate (Expert-Comptable Mémorialiste) & Certified Analytics Engineer | 5 years in accounting and audit, incl. 3 years in financial & IT audit at Forvis Mazars.

EXPERIENCE

Senior Financial Auditor & Data Analytics

Forvis Mazars

September 2025 - Present, Toulouse

- Led and supervised a team of 3 to 5 auditors on large-cap engagements: planning, work review and deliverables management.
- Designed and deployed Data Analytics tools (Alteryx, SQL, Power BI) to automate Procure-to-Pay cycle controls, significantly reducing analysis time and strengthening the reliability of audited figures (oversight of a €1B+ procurement portfolio).
- Performed combined financial and IT audits: internal controls assessment, risk analysis and recommendations on compliance frameworks across complex digital environments (from planning through audit report issuance).
- Coordinated audit engagements in an international context, with cross-functional steering between local and group teams (15 countries supervised).

Junior Financial Auditor & IT

Forvis Mazars

November 2023 - August 2025, Toulouse

- Assessed financial controls and risks on audit engagements (Industry & Services, Financial Services sectors): reviewed financial reporting reliability and issued recommendations to operational stakeholders.
- Audited financial information systems (ITGC/ITAC) across SAP and other ERP environments: evaluated the reliability of IT systems and their impact on financial reporting — direct interface between Finance and IT teams.
- Performed data analytics on key financial cycles (revenue, inventory, expenses): leveraged large datasets (1M+ journal entries) for anomaly detection and validation of financial assertions.

Accounting Apprentice

Orcom

September 2021 - October 2023, Toulouse

- Managed a multi-sector client portfolio: prepared financial statements and supported business owners in steering their financial performance.
- Master's thesis: designed a financial forecasting model using machine learning — demonstrated the value of AI applied to financial analysis and forecasting.
- Automated accounting data entry processes through Excel macros, reducing processing time on recurring data flows.

PROJECT

Financial Forecasting Model — Machine Learning

Toulouse • December 2025 - Present

- Designed and developed a financial forecasting model based on machine learning (XGBoost), trained on 3+ years of historical data to anticipate short and mid-term revenue variations.
- Advanced feature engineering integrating multi-source variables: weather data, school calendar, local events and seasonality.
- Implemented SHAP values to ensure prediction interpretability: identified key performance drivers and translated model outputs into actionable insights for operational decision-making.
- Interactive dashboard for forecast visualization and decomposition of influence factors.
